DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species: A) Figures 1-3

B) Figure 4

2. The species are independent or distinct because they disclose retractable foot pedals that utilize different operating mechanisms.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim1 appears generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

3. During a telephone conversation with Mr. John Sinnott on January 9, 2007 a provisional election was made without traverse to prosecute the invention of the species

Art Unit: 3781

in group B, claims 1 and 4-6. Affirmation of this election must be made by applicant in replying to this Office action. Claims 2 and 3 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Spiro (5,390,812). Spiro discloses a waste receptacle with two foot pedals (25) for selective extension from and retraction into the base and the side in at least two recessed housings formed in the base, and detents (34) for releasably retaining the foot pedals in extension from and retraction into the base (Figures 1-3, column 3, line 63 to column 4, line 61).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 4-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Spiro.

Art Unit: 3781

8. Regarding claim 4, Spiro discloses the claimed invention except for the detents on the foot pedals (34) comprising protrusions and the stops (47, Figure 2, column 5, line 56 to column 6, line 12) have the indentation, forming a gap between the top surface of the pedal and stop. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the indentations on the foot pedals and protrusions on the stops, since it has been held that a mere reversal of the essential working parts of a device involves only routine skill in the art. In re Einstein, 8 USPQ 167. The stops engage selectively the detents to releasably retain the foot pedals in extension from the waste receptacle.

9. Regarding claim 5, the detents comprise a round formed on the foot pedal.

10. Regarding claim 6, the stops comprise means for bridging the recessed housings.
